

PRODUCT ORIGIN AND TRACEABILITY STATEMENT

Public statement on lawful sourcing, quality assurance, supply-chain traceability and chain-of-custody controls.

ISSUING ENTITY	Leano Larona Holdings (Pty) Ltd, trading as Leano Energy
DOCUMENT PURPOSE	Product-origin, traceability and regulatory-compliance assurance
ISSUE DATE	29 July 2026

Leano Energy is committed to ensuring that petroleum products supplied to customers are lawfully sourced, quality assured and traceable throughout the supply chain.

Product Sourcing and Origin

Leano Energy procures petroleum products through the regulated South African petroleum industry and, where applicable, from approved international sources imported through licensed and compliant channels.

The company works with licensed refiners, importers, wholesalers, terminal operators, storage facilities, transporters and other authorised supply-chain partners.

Products are stored, loaded, transported and delivered through approved petroleum facilities and logistics networks that operate in accordance with applicable quality, safety, environmental and regulatory requirements.

Product Traceability

The origin and movement of each product batch can be traced through the relevant supply-chain and delivery documentation. Depending on the product, source and transaction, this documentation may include:

- Supplier delivery documentation;
- Purchase and product allocation records;
- Terminal loading confirmations;
- Loading and gantry documentation;
- Bills of lading for imported petroleum products;

- Certificates of Origin, where applicable;
- Certificates of Quality;
- Certificates of Analysis;
- Customs and SARS import documentation, where applicable;
- Product movement and stock reconciliation records;
- Road tanker loading and dispatch documentation;
- Delivery notes, seal records and proof of delivery; and
- Custody-transfer and customer acceptance records.

Supporting documentation is retained in accordance with applicable legal, contractual and record-management requirements. Relevant records may be made available to customers, regulators or authorised parties upon request, subject to commercial confidentiality and applicable legal restrictions.

Quality and Regulatory Compliance

Leano Energy requires all petroleum products supplied through its network to comply with the specifications, standards and legislation applicable to the relevant product, including:

- Applicable South African National Standards;
- The Petroleum Products Act, 1977 (Act No. 120 of 1977), as amended;
- Regulations and requirements administered by the Department of Mineral and Petroleum Resources;
- SARS Customs and Excise requirements governing petroleum products;
- Applicable environmental, occupational health and safety, transportation and dangerous-goods legislation;
- Product specifications prescribed by the relevant supplier, refinery, importer, storage facility or terminal operator; and
- Contractual quality specifications agreed with the customer.

Where applicable, product quality is supported by Certificates of Quality or Certificates of Analysis issued by the authorised supplier, refinery, laboratory, importer or terminal operator.

Product Integrity and Chain of Custody

Leano Energy applies controlled procurement, loading, transportation and delivery processes to protect product integrity throughout the supply chain.

Each product movement is supported by appropriate quality-verification, loading, dispatch, delivery and custody-transfer records. These controls assist in confirming that the product delivered to the customer corresponds with the product released from the authorised supply source.

Approved road tankers, suitably qualified personnel and compliant logistics providers are used for the transportation of petroleum products. Product seals, loading records, delivery documentation and customer acceptance procedures are applied where required.

Continuity and Security of Supply

To maintain continuity of supply, Leano Energy may procure equivalent-specification petroleum products from alternative approved suppliers, terminals or authorised supply points within South Africa or through lawful import channels.

Any alternative product must meet the applicable contractual specifications, quality requirements and regulatory standards. Supply-source flexibility does not remove or reduce Leano Energy's requirements relating to product quality, legal compliance, traceability or chain-of-custody control.

Through its diversified procurement strategy, commercial supply relationships and compliant logistics network, Leano Energy aims to provide customers with a secure, reliable and consistent supply of petroleum products.

Our Assurance

Leano Energy confirms that petroleum products supplied through its operations will be procured from authorised sources and handled through licensed and compliant channels.

- Lawfully sourced;
- Fully traceable through applicable supply-chain records;
- Supported by appropriate quality documentation;
- Handled and transported in accordance with applicable legislation;
- Delivered according to the agreed product specification; and
- Managed through a documented chain-of-custody process.

Leano Energy remains committed to transparency, product integrity, regulatory compliance and responsible petroleum supply across every market and customer segment it serves.

For customer, regulator or authorised-party requests relating to product traceability records, please contact Leano Energy through the details reflected on this letterhead.
